Anja Diekmann • Order processing / Marketing support

From the heart of East Westphalia into the world. NSC – with an international focus.

We are crossing borders. Not only when it comes to the question of whether security technology is feasible, but also in the geographical sense. An international focus has been part of our company concept right from the start. Today we have representing branches in Spain, the Netherlands, Italy, Portugal, Greece, Dubai and India. Our products are exported to more than 35 countries and our export business share is about 30 to 40 percent – with a rising tendency. Attending many international exhibitions at home and abroad complements our global activities and is also a facet of practical customer proximity.

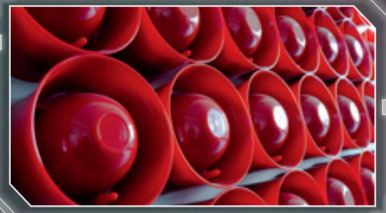
EXTRAORDINARY COMPETENCE

Professional Fire Alarm Technology –
Made in Germany. Safety in every respect.

Fire alarm technology is the most important business division at NSC. We can be more than a little proud of our competence in this area. The reason for this is that our founders, Felix Buß and Andreas Diekmann have more than 30 years of experience in the field. We manage a complete process chain starting with the development of high quality products according to DIN EN standards, VdS and ISO 9001, followed by our own production at the headquarters in Bielefeld and completed by our extensive training and support programme, which is clearly above the general standard in the industry.

NSC-Fire Alarm Technology:

- **Unique performance characteristics**
- **Outstanding quality**
- **Best service and support**
- **Comprehensive know-how**
- **Future stability**



Andreas Töpfer • Head of Production / Warehouse

"It is good to see that our own developed products usually even exceed our customers' expectations."

Felix Buß • Managing Director and Head of Development

TURNING IDEAS INTO REALITY

Our own development of innovative products – a challenge and passion at the same time.

Experienced NSC development engineers and talented junior employees dedicate themselves to challenging tasks day after day. Here is just one result from this targeted “mental exercise”: The fire control panels Solution F1 and F2, which are highly successful, demanded globally and constantly perfected. The fire alarm control panels support two different protocols (Apollo and Hochiki). Moreover, the sometimes highly specific requirements of our customers are gladly taken on as challenges – and are fulfilled with creativity and ambition.

PRECISE MANUFACTURE

Michael Grätz • Production

A clear advantage of our own production:
Always knowing what we are doing.

Assembled expertly by qualified staff – high-quality components become high-quality products in our own production hall. Precision is the highest priority here. Each fire control panel unit is thoroughly tested in a 24-hour quality endurance test before it goes to the customer.
Our "flagship", the Solution F1 fire alarm control panel, is assembled modularly, meets national and international standards and requirements and is – verifiably – compatible like no other. Solution F1 also offers versatile and individual features and extension options.

CLEAR ANNOUNCEMENTS

NSC-Voice Evacuation Systems makes information audible – a good sound for more security.

Voice evacuation systems have developed into one of the most important areas in the domain of security technology. Therefore NSC attaches huge importance to this topic. Our audio management systems were designed with practical orientation and guarantee outstanding performance where many people have to be entertained, informed and possibly evacuated at different times. Of course they are VDE and EN certified and work particularly well in conjunction with NSC-fire alarm systems. Systems, which are perfectly coordinated and which complement each other ideally.

HIGH DEFINITION

Pin-sharp viewing: with NSC CCTV. Keep an eye on everything – any time and from anywhere.

NSC is also actively involved with the business division of video surveillance. The “NSC Videotechnik GmbH” brand, managed under its own company, established itself on the market within a very short time. The new HD video surveillance technology combines the advantages of mega pixel technology with decade-long tried-and-tested analogue technology. All components are equipped for Full HD and ensure uncompressed, latency-free picture quality via coaxial cables in real-time. With the innovative NSC-SYSTEM, NSC offers the complete and clear video surveillance technology system. Here too you can say: Only the best is good enough.

WELL DONE

„Our fire alarm control panels Solution F1 and F2 are successful and have proven to be reliable around the world.“

Andreas Diekmann • Managing Director

Demanding projects for the most diverse areas of application – implemented successfully worldwide.

Each project and each customer has specific aims and requirements. This is what makes security technology so interesting. Many customers trust our products and our expert competence. The list of references comprises a wide range, from airport and rail projects, to offices, hotels, banks, warehouse facilities and industrial sites. Particularly exceptional is the “Independent Deepwater Petroleum Terminal“ in Malaysia, which was praised in the international trade press. And furthermore: renowned logistics centres with up to 8,500 addressable devices.

SUPPORT INCLUDED

Advance through know-how – training sessions are an integrated part of our customer service.

It is a matter of course for NSC that we wholly support customers that install our systems. We guarantee continued support and do not abandon our partners. Planners, technicians and distributors receive expert know-how in training sessions, workshops and on-site training, which they can apply to their projects in a useful and profitable way. To adequately meet continuous company growth, NSC is employing more than 100 qualified, highly motivated people; 30 percent of them abroad. Fast order processing and prompt delivery are just part of our daily practice.

More than **1.000** attendees per year

Frank Albrecht • Technical Support, Training

CREATING VISIONS

Development of the future begins today.
We are taking the opportunity to participate.

With one aim in mind and with strong determination – this is how the NSC success story started and this is how we are moving into an exciting future. We continue to perfect our products and to find solutions that are always one step ahead of the times. The company aims to grow further and add new international branches. Despite all of the perspectives, however, there is one thing we will not lose sight of: The down-to-earth attitude and reliability of an ownermanaged East Westphalian company.

- Continuity
- Growth
- Integrity
