

KIM TIN GROUP PORTFOLIO

WELDING CONSUMABLES

Dear Our valued Customers and Partners,

Kim Tin is a leading corporation specializing in manufacturing and trading welding consumables in Vietnam. Over 23 years of establishment and development, Kim Tin's products have been present in more than 25 countries around the world. Quickly adapting to the changes and development of the market, Kim Tin continues to affirm our outstanding progress by constantly expanding the scale, improving service quality, and diversifying the product lines.

Kim Tin Group commits to doing our best to carry out the assigned functions and tasks with the business philosophy of "balancing the interests of stakeholders", promoting the creative power of the collective, taking advantage of human resources, and showing a high sense of responsibility in all business activities and business cooperation. To become a sustainable development corporation like today, it is indispensable to have the support, encouragement, and cooperation of customers and partners. Kim Tin wishes to continue to accompany your prosperous development in the future.

Once again, we would like to express our sincere thanks and deep gratitude to our Customers and Partners.

Sincerely,

Chairman of the board

Nguyen Tien Hai

WELDING CONSUMABLES

Welding Electrodes

Low carbon welding electrode

E6013

Low carbon welding electrode E6013 is a low carbon welding rod suitable for welding Carbon steel and low alloy steel with medium load structures such as industrial factory structures, machine parts, railings, iron doors....

Stainless steel electrodes

G-308

Stainless steel electrodes G-308 is suitable for welding austenitic stainless steel (stainless steel) such as E304; E305, E308.. sometimes with good mechanical properties, high strength and toughness, G-308 is also used in structures subject to heavy loads and high wear resistance.

Low carbon welding electrode

E7018

Low carbon electrode E7018 welds low-carbon and low-alloy steels, with tensile strength ≥ 510N/mm2. E7018 is the best choice for welded structural strength problems, suitable for ship structures, construction, wharfs, heavy-duty beams, pressure tanks, etc

TIG welding electrode

ER308L

TIG welding electrode ER308L is suitable for welding all kinds of tanks, chemical tanks, load-bearing structures, acid-resistant, equipment in the medical and food industries... ER308L is suitable for bottom sealing such as pressure tanks, pipelines, etc. load-bearing steel structures, civil structures, cars, ships...

Welding Wires

MIG/MAG Welding wire

ER70S-3 & ER70S-6

ER70S-3 & ER70S-6 are mainly used in companies that manufacture car components, motorcycles, precision mechanical manufacturing, etc., where welding is done by pre-programmed robots

SAW Welding Wire

EL-12

The advantage of automatic and semi-automatic welding under the fluxed layer of EL-12 welding wire is to ensure the quality of the good weld - uniform, high productivity and save welding wire.

SAW Welding Wire

EM-12K

The basic advantage of automatic and semi-automatic welding under the drug layer of EM - 12K welding wire is to ensure the quality of the good weld - uniform, high productivity and save welding wire

Stainless Steel Welding Wire

GM-308L

GM-308L is welded by semi-automatic technology with 100% Argon shielding gas (MIG welding) to create a stable weld with little splash, bright smooth weld. GM-308 is suitable for welding chemical tanks, load-bearing structures, acid-resistant as well as medical equipment
