Sol wireless control panel

The new wireless intrusion control panel by Inim is Sol. Getting the Sol up and running is incredibly quick and easy thanks to a simplified installation procedure.

Integrated QuickGO technology: the InimTech Security App allows quick programming of wireless devices and allows you to get small installations running in record time. The Sol is also connected to the Inim Cloud and offers installers and users full information and easy commands which can be activated by a single touch. It is sufficient to install just one LAN, WiFi or GSM module in order to have access to the full potential of the Inim Cloud - users and installers will see instantly the completeness and ease of use of information and commands accessed through the App and the web pages of Cloud.

ACTpro & ACT365 access control solutions: Leaders in cloud and on-premise access control systems

ACT access control solutions are role-based, scalable and available as either on-premise and cloud-based systems, supporting all vertical requirements. Incorporating advanced feature sets such as video and intrusion integration will aim to help protect people, property and assets.

Bluetooth low energy readers are a secure and flexible identification solution bringing the access credential to Android™ and iOS® smartphones. A simple credential license model offers users long-term cost savings without annual subscriptions or hidden costs.

SPC integration

ACTpro software interfaces with Vanderbilt's SPC intrusion system and allows real time system status to be viewed via its graphical user interface.

Using a simple drag and drop method, icons can be located on a map allowing the security operator to view real time alerts and take appropriate action to cancel and acknowledged alarms. This enhanced cause and effect integration allows for customizable outcomes such as locking doors automatically in an alarm event.

ACT365 is Vanderbilt's award-winning, cloud-based access control and video management solution

ACT365 holds many advantages for installers and end-users alike. Integration: By combining access control and video management into one unified interface, business owners can obtain more visibility and control of their premises. For example, when incidents occur at a door (as they often do), operators can simply click on the access control event to locate and review the recorded footage. Additionally, with alarm panel integration, ACT365 allows authorized cardholders to arm and disarm the system, either with a credential or from the web portal.

Peridect+

PERIDECT+ detects an intruder directly on the boundary of the protected area and gains sufficient time for the security operator for an effective reaction. It brings lower risk and higher prevention of larger damage than intrusion detection inside the protected site. Peridect+ can be installed on all common types of fencing but also on non-standard fencing like metal plates and welded decorative fences.

AMG launch New 19" retractable rack and AMG570 Compact

For the 2034, its short depth and heavy duty slide-out mechanism ensures an easy-to-install solution for AMG and third-party DIN rail equipment in 19-inch racks and cabinets.

The 2034 features a locking line cord to prevent accidental disconnection. Each rack chassis features removable screw terminal connections for up to ten devices depending on product width and occupies only 4U of rack space offering a simple and elegant rack mount solution for space-restricted installations.

The new rack can be ordered without any power supply as a pure mounting system fully integrated single or dual redundant mains or DC input power supplies with both twelve volt DC and 56 volt DC outputs, available to support power over ethernet and non-power over Ethernet equipment.

It is designed and manufactured in the United Kingdom.

AMG570 Compact, one of the smallest fully managed L2+ switches

As for the AMG570 Compact, is one of the smallest switches in the market but still carries many of the same features as the larger eleven port model all within a small package. These thermally efficient units can be DIN rail or wall mounted making installation or maintenance quick and easy.

The switch has four Gigabit Ethernet RJ45 ports along with an additional two multi-rate SFP ports that can support 100 Megabit, one Gigabit and 2.5 Gigabit Ethernet switching for high-speed data uplinks for core or distribution network applications, allowing site wide flexibility in compact spaces.

Featuring the latest ERPS (G8032) and MRP Ring Protection, the Compact also offers complete peace of mind for critical network infrastructure projects. Being designed and manufactured in the UK, AMG maintains full control over the security and reliability of the product.

AMG provide free-of-charge, comprehensive technical support from qualified network engineers.

Prison room windows - custom built security

In forensic psychiatric clinics and prisons, which are under monument protections, the use of window bars is often not possible. In order to meet the requirements for burglar resistance, the aluminum windows made of thermally insulated aluminum profiles are burglar resistant tested according to DIN V EN V 1627 in class WK 4. For the needs of the respective institution as well as according to the requirements of the federal state, there are various prison room window designs.
