New wheels design: presentation on the 30. November

On 30. November Barracuda Wheels presents its new rim design. The presentation of the new spectacular rim design takes place at 4 p.m.. Tzunami EVO stands for a revolution in terms of technology, appearance, load capacity and surface refinement. The wheel will be available from spring 2019 in 18-20 inch sizes.

Other highlights such as the new project 3.0 wheel with milled spoke contour can also be admired.

Three-way adjustable ST XTA plus 3 coilover with top-mounts for Nissan Skyline GT-R (R32)

Even for models that are unusual in the European car market, ST suspensions continually expand the suspension applications in their program. The ST XTA plus 3 coilover kit gives the 1989 to 1994 Japanese built sportscar an improved driving dynamic with its 3-way adjustable KW shock absorbers.

With only a few steps, it is easy to adjust the high-speed and low-speed compression settings with 24 clicks and rebound forces with 16 clicks. With the trapezoidal thread on the MacPherson struts, the coilover kit enables a lowering of 45 to 65 millimeters at the front axle and 45 to 65 millimeters at the rear axle.

Like all ST height-adjustable springs and ST coilover kits, the ST XTA plus 3 coilover suspension are also available through the „Make it Yours“ program. The XTA plus 3 coilover suspension kit can be ordered in 18 different spring colors from specialist dealers and directly from the ST suspensions website. In addition, the springs can also be personalized with customizable text.

Latest version of the Dynamometer VT-2 EVO 2 Mobile version

A post-expo unit of the latest model of the VT-2 EVO 2 dynamometer in the mobile version: Thanks to the use of additional rollers, the measurement is available for vehicles with a wheelbase of 340 to 2200 millimetre, which also gives the ability to use it for an ATV measurement.

When using the inertial mode for cars, the small rollers act as an additional rotating mass, effectively increasing the moment of inertia. Thanks to this application, cars with high power get a longer and more readable measurement chart.

The set includes ramps, vibro-isolators and wheels, a rack and a laptop.

Don't forget that together with V-tech dyno the company also provides training and after-sales support. What's more, the dyno is covered with full two-years warranty and can be upgraded later to the load version - in this case, the small dynamometer rollers are replaced by an eddy-current brake and later even to a 4x4 version.

Price: 18730€ net. Ready to collect right after the show on December 9.

Bremotion celebrates premiere at the Essen Motor Show

The tuning and motorsport specialist Bremotion is exhibiting for the first time with its own stand at the Essen Motor Show. The Frankfurt company will present a Mercedes-AMG GT4 racing car and thus give an initial preview of the 2019 season.

It is planned to use one to two Mercedes-AMG GT4 in the new ADAC GT4 Germany. The ADAC GT4 Germany will take place on six race weekends as part of the popular ADAC GT-Masters and promises gripping motorsport. The choice of the AMG racing car is no accident. Bremotion has been a BRABUS Gold Partner since 2015 and refines road vehicles from Mercedes-Benz and AMG at the highest level.

The near-series GT4 racing car, which is based on the Mercedes-AMG GT R, remains unchanged and already has an extremely high racetrack performance in its series version. The Mercedes-AMG GT4 is powered by a 4.0-litre V8 engine with biturbocharging, which delivers up to 375 kW (510 hp) and over 600 Nm of torque, depending on the regulations. In addition to the ADAC GT4 Germany, the car can also be used in the VLN Endurance Championship, the ADAC 24-Hour Race at the Nürburgring, the DMV-GTC or in international GT4 series.

Bremotion is actively supported by [Senkpiel Car & Driver](#), the expert for successful driver management, and GT3 young talent [Marek Böckmann](#), who is available as driver coach. The logistics part is handled by the [Maintaler Group](#), the specialist for time-sensitive and handling-sensitive transports.

WHEELPROTECT: Wheel protection attachment for disassembly/assembly

WHEELPROTECT is mounted as a "gentle attachment" on the corresponding rim in the respective hole circle and protects the surrounding material during assembly or disassembly, since direct contact between impact wrench/power nut and aluminium rim is prevented.

- | Prevents damage during disassembly of rims
- | Adjustable in all sizes from 5x98-160 (or 4x98-160)
- | Prevents scratches and similar damages
- | Suitable for almost all power plug nuts (without protective attachment)
- | Easy to use

Everyone knows it, and no one likes it. No matter whether vintage cars, sports cars or your own beloved vehicle, no one is spared the visual damage of classic wheel changes.

So far there was no perfect solution, and the already existing plug-in attachment for kernels does not allow scratch-free removal/installation due to wear and high rotation speed.

Wheelprotect was developed for this problem. The template is attached as a protective attachment to the respective rim before de-/installation. Wheelprotect ensures that there is no contact between the power nut and the rim and thus serves as "impact protection" against the rotation of the torque wrench or impact wrench.

Thus you can, for example, give your expensive accessories/original rim into the hands of the familiar fitter without any worries and hassles.

H&R Height Adjustable Spring Sets: The sportiest suspension solution - also for automobiles with adaptive dampers

Innovative components such as the H&R height adjustable springs were already developed by the Sauerland suspension specialists at the end of the 1990s. With a current range of more than 150 applications, the focus is on vehicles which are originally equipped with adaptive suspension or damping force adjustable shocks.

The clou: Thanks to the reasoned adjustment mechanism, the H&R engineers make it possible to continuously lower the vehicle's centre of gravity by approximately 30 to 50 millimetres (contingent upon the vehicle), depending on the desired residual spring travel, even though the standard shock absorbers are retained. This not only ensures a particularly sporty vehicle appearance but also a significant increase in driving dynamics.

The H&R professionals of course carefully match the height adjustable spring systems to the respective original shocks and their individual characteristics. For this reason, neither an adaptation of the control electronics nor the technically questionable discontinuation of these is necessary, which needs to be done when installing conventional coil over suspensions. With the H&R height adjustable springs the active standard suspension remains fully functional.

From a technical point of view, the lowering of the vehicle's centre of gravity in combination with the spring characteristics finely tuned in best H&R manner reduces the roll tendency and specifies the turning behaviour more precisely. Visually, H&R height adjustable springs provide a much more sporty vehicle look with wheels that are positioned harmoniously in the mudguards.

H&R height adjustable springs are available for many vehicles, including approvals, for example:

BORBET LX

A wheel, which fulfills this standard to perfection, is the new design LX. This wheel combines the weight reducing machining process UnderCut with different surface technologies such as the innovative ExaPlus-technology: "anodic dipping (ATL)", which is just one of the wide range from the BORBET portfolio. Due to this, theoretically around 500 colour and surface combinations on the design LX are possible. Borbet is able to offer its retailers diverse wheel finishing options, and possibilities, even in small quantities.

Therefore, the Borbet LX secures its role, as a public magnet at the BORBET booth. The "Sporty" wheel will be available for the spring season 2019 in 8.0 and 8.5 x 19 inch. The BORBET range includes the colour versions „black glossy rim red“, „black matt spoke rim blue polished“, „black matt spoke rim polished“, „graphite spoke rim polished“ and „graphite spoke rim red polished“. These five from 500 variations are in the Borbet standard program.

MUSWAY – Music Is The Way: Technology for sound enthusiasts

The slogan “TECHNIK FÜR KLANGBEGEISTERTE” (literally: “technology for sound enthusiast”) is program at MUSWAY. This becomes particularly clear when taking a closer look at the high-end hi-fi components of the power amplifiers: Highly efficient Class D technology is used, and each channel pair can also be switched to mono, which makes it particularly easy to connect subwoofers. Even more important as function, however, is the sound: in countless listening sessions, the individual components have been fine-tuned so that even the most critical listeners get their money’s worth.

High functionality combined with the highest sound quality: It does not matter whether simple factory speakers are beefed up acoustically, or whether everything is retrieved from retrofitted, higher-quality speakers with the countless control options. In the latter case, the result is of course much better. Thanks to DSP, virtually any corrections can be clearly arranged. Whether frequency correction, Q-factor, time alignment, phase shift or extensive switch configurations, the sonic non plus ultra becomes possible in the first place.

For the audiophile and masterful-sounding DSP amplifiers, the matching game partners are now also available in the form of perfectly tuned speakers and innovatively designed subwoofer systems. Thanks to the extensive range of powerful and optimally tuned sound transducers, nothing stands in the way for a complete MUSWAY sound system in your vehicle. The passionate inventors from the MUSWAY sound lab showed the same dedication and meticulousness that was celebrated during the development of the DSP amplifiers. When designing the sophisticated loudspeakers and subwoofer systems, only the finest components and innovative materials are used, which more than just pays off in the balanced and outstanding sound performance, as well as in the power delivery and longevity.

Recaro Automotive celebrates six decades of seating focus with two world premieres – Sport C and Podium GF

Almost 60 years ago, a new era began when Reutter Carrosserie began to focus on the development of innovative car seats under the new name Recaro. Since then, the brand has been synonymous with performance like no other: on the race track, on the road or at home. Recaro will properly celebrate the prelude to the upcoming anniversary during the Essen Motor Show 2022. At the booth, visitors can marvel at the world premiere of the new Sport C and the new Podium GF. In addition, there will be fascinating highlights from the extensive seat portfolio, sleek outfits and accessories from the lifestyle collection, and exciting panel talks with featured guests from the scene.

What would the automotive world look like without Recaro? One thing's for sure: less exciting, less fascinating, and less comfortable. Thankfully, this remains a thought experiment, because in 1963 the Stuttgart-based company Reutter Carrosserie began focusing on its current core segment. Since then, seats from Recaro have always set new standards in dynamics, safety, quality and comfort.

“At Recaro, we write performance in all caps. The concept permeates everything we do. It's what our heart – and that of our fans – has been beating for under the Recaro name for nearly six decades now,” says Ulrich J. Severin, Managing Director of Recaro Automotive and Vice President Europe. “So it's only fitting that we pull out all the stops at Essen, with exciting news and special promotions.”

Recaro will be celebrating the upcoming anniversary at its booth in hall 3 - with, among other things, the new Sport C. This new seat continues the tradition that began in 1965 with the “Sportsitz”. Like its predecessor, it is a genuine market revolution. The Sport C is the first aftermarket sport seat with a fully electric 8-way mechanism. It thus skilfully bridges the gap between comfort and performance requirements.

High End Car Audio Products recapture the market

Customer's requirements in terms of in-car audio and entertainment's quality and functionality are no longer addressed solely to the car manufacturer. Individual expectations on sound, connectivity and user friendliness of automotive infotainment are rising with the hours that consumers spend in their car. Today's automobile customers wish to travel as pleasant, entertaining and as audiophile as possible. The industry is reacting to this trend with new custom fit technologies and an extended range of high-end car audio products.

In the new Hall 8, the CarMediaWorld will once again create an attractive platform for the hot topic of Car Hifi and infotainment. Leading brands such as Audio System, ESX, Gladen, Dynavin, JVC Kenwood, HiFonics, JL Audio, Musway, Pioneer and Rockford Fosgate make high fidelity, automobile connectivity and digitalization a thrilling experience. They perfectly complement the exhibition's horse-powered exhibition program and provide an opportunity to examine the technology trends and innovations and to experience them in one of the many show vehicles.

Sound Tuning goes digital

With audiophile sound, ultimate entertainment and up-to-date information, driving turns into an exciting experience - no matter which generation the car belongs to. Even proven vehicle models can be equipped flawlessly and budget-friendly with latest sound and infotainment innovations.

These trade fair innovations make the streets burn

The new RONAL R72 is celebrating a premiere. The futuristic 5-spoke design features an aesthetic aero ring with an innovative honeycomb structure. This ring is not attached, but firmly integrated in the wheel and dynamically interrupted by the spokes. Aerodynamic rims reduce air turbulence and can therefore help to significantly reduce the vehicle's flow resistance.

The RONAL R71 is perfect for all high-mounted vehicles that require a high load capacity and is characterized by increased strength and striking sportiness. It is as if made for the special requirements of hybrid vehicles, in which hip trends and CO2-free drives are increasingly being combined. The multi-spoke design is available in three different surfaces and gives the vehicle an absolutely unmistakable character. Combined with low-friction tires, the rolling resistance can be minimized and fuel consumption can be reduced as a result.

The Classic Range has been as well expanded: the popular RONAL R9 retro wheel in the penta style gives every legend an unmistakable look. This classic, which shaped a whole generation of car fans, is now also available as a two-colour extension in silver and gold and is a real cult object. The penta-style drop center wheel is the perfect upgrade for classic vehicles with an "H" license plate and a long tuning tradition. The RONAL R9 has been tested, provided with a KBA number and approved for some historic vehicle models for the road.

World Wheel Award 2023: The light-alloy wheel manufacturer BBS applies with the RT Unlimited (RT-U) wheel

The light-alloy wheel manufacturer BBS is nominated as well and takes part at the World Wheel Award with its new BBS RT Unlimited (RT-U) light-alloy wheel in 10,5 x 20 inches (offset is at 28 millimeters). The wheel will soon become a part of the Classic design line at BBS. The letters "R", "T", and "U" stand for "Racing", "Track", and "Unlimited". Wheel sizes of 18, 19, and 20 inches and rim widths of 8 to 12 inches are planned.

For the World Wheel Award, the RT Unlimited wheel will be presented with a Glossy Black rim bed and a rim star in Satin Bronze directly at the Essen Motor Show. Furthermore, the new wheel design can also be examined directly at the BBS fair booth. The color palette for individualizing the rim bed and rim star is currently in the making. In the future, BBS plans that new colors are possible at any time.

Licence plate holder made of aluminium AluFixx

Sometimes innovation simply lies in the detail: The MEDES Aluminium Manufaktur from Sprockhövel have once again decisively modified their ALUFIXX®Car licence plate holder. The product was equipped with a special fastening technology. Result: The new generation ALUFIXX®Car now fits every vehicle - even in problematic fastening environments (niches or beads in bumpers or bodywork).

License plate mounting with ALUFIXX®Car has become even easier:

- | Screw the brackets to the specified fixing points
- | Place the label in the grooves of the brackets from the front.
- | Tighten the clamping screws.

The number plate is clamped and additionally stabilized in the same way as a vice, thanks to the predetermined buckling points in the holders.

- | Theft is made more difficult, loss and vibration prevented.
- | One-time purchase the carrier system can be repeated over and over again can also be used.

Incidentally, the frameless license plate holder made of high-quality, corrosion- and weather-resistant aluminium impresses with its perfect appearance and simple elegance. The licence plate seems to float. No clumsy plastic edges of conventional systems interfere with the lines of the body. ALUFIXX®Car is particularly suitable for youngtimers and classic cars due to its design and optical properties.

The anodized license plate holder is available in silver aluminium or matt black, as well as in high-gloss polished and paintable versions.

Finally, ALUFIXX®Car also offers the possibility of discreet individualisation. Motif carriers (for logos, lettering, names) can be fixed behind the number plate without disturbing it.

OEM Steering wheel spacer

A new mechanical device that brings the OEM steering wheel five centimetre closer to the driver, adding stroke to the existing depth regulation of the OEM steering wheel.

This leads to a completely new driving position which boost both the steering feel and the driving position comfort. The car feels like a different car, more roomy inside and with better driving handling.

The spacer mantains active the steering wheel buttons, the airbag and the paddleshifters if available.

It's a new product, invented by Spacershop, to gain the advantage of the aftermarket dished steering wheel, but retaining the OEM steering wheel.

A true boss kit 2.0

World's first fully modular linked dynamometer

Modular dynamometer (Vtech Dyno EVO) means that there is no need to buy 4wd dyno at once. You can have front module, without electromagnetic brakes, and buy brakes, 4wd extension and additional sensors later. Thanks to fully modular design everything is expandable.

The VT2/VT4 modular chassis dynamometer series have been present on the European market for more than a decade. The first rolling road was created and installed in 1999 and since the very beginning they featured an exceptional accuracy of measurement and reliability. During the following years the chassis dynos (rolling roads) have been constantly developed and improved by the R&D department, significantly widening the product range. Today variants of V-Tech Performance's dynamometers include modular one axle dynamometer and 4wd chassis dynamometer for 4x4 vehicles. Multiple models, configurations and options of chassis dynamometer product line are available (main one axle modul is always in stock) for sale.

The dynamometers are available in both inertial and braked versions. Additionally in the 4x4 version V-Tech use a novelty system of mechanical synchronisation of front and rear axles, which gives the possibility for measuring the most modern cars, equipped with active traction control systems. Supplementary to the wide offer are dynamometers for motorcycles and quads.

Latest version of the Dynamometer VT-2 EVO 2 Mobile version

A post-expo unit of the latest model of the VT-2 EVO 2 dynamometer in the mobile version: Thanks to the use of additional rollers, the measurement is available for vehicles with a wheelbase of 340 to 2200 millimetre, which also gives the ability to use it for an ATV measurement.

When using the inertial mode for cars, the small rollers act as an additional rotating mass, effectively increasing the moment of inertia. Thanks to this application, cars with high power get a longer and more readable measurement chart.

The set includes ramps, vibro-isolators and wheels, a rack and a laptop.

Don't forget that together with V-tech dyno the company also provides training and after-sales support. What's more, the dyno is covered with full two-years warranty and can be upgraded later to the load version - in this case, the small dynamometer rollers are replaced by an eddy-current brake and later even to a 4x4 version.

Price: 18730€ net. Ready to collect right after the show on December 9.

The most powerful Toyota Supra MK5 close to 800 hp

In cooperation with the tuning forge "Dreihundert" from Dresden, TurboZentrum presents the world's strongest road-legal Toyota Supra MK5, a yellow beast with endless power.

Without further tuning, the fifth generation of the Toyota Supra (A90) delivers 340 hp. However, the fact that the in-line six-cylinder from BMW installed in the new Supra is capable of much more is impressively demonstrated by the Dresden tuning company "Dreihundert" at the TurboZentrum booth: In its current configuration, the car has almost 800 hp and 900 Nm.

A yellow beast

781: This is the number of horses galloping under the hood of the yellow beast on the test stand according to the measurement. The tuners achieved the increase in performance through numerous modifications to the engine. The centerpiece of the performance increase is a BorgWarner EFR 8474 turbocharger with aluminum basic unit, internal wastegate and electronic boost pressure control. The compression ratio was reduced to 10.4:1 by piston machining and the cylinder head was also revised.

Of course, extensive modifications were also made to the powertrain. The crank drive of the Toyota was precision-balanced, the oil gallery of the crankshaft modified. In the area of the exhaust casing, stainless steel manifold and downpipe, the tuner relies on effective thermal insulation. Other modifications include more stable H-shaft connecting rods, an Aquamist water-methanol injection system and a KW V3 coilover suspension. Additionally, a PureBoost software was implemented.

New car care products of the finest quality

Sonax, the leading car care specialist, is putting the spotlight on the new products for the coming season for the first time. Visitors will be able to view numerous innovations. And this already a few days before the official market launch.

One interesting innovation that will be presented for the first time at the Sonax stand is the new "Sonax Xtreme Polster & Alcantara Stain Remover Ultra Strong". The highly effective problem solver makes annoying soiling of car seats and interior textiles a short process - with a particularly powerful yet gentle effect. The very economical stain remover is particularly suitable for removing stains on sensitive Alcantara surfaces.

For leather: "Sonax Xtreme Leather Care Milk"

Sonax Xtreme Leather Care Milk" continues to be a new addition to the development of Sonax car care professionals. This innovation in the high-performance Xtreme care series from the car care specialist, which is based on natural active ingredients, cleans, cares for and protects all smooth genuine and imitation leather covers in cars and households with "Matteffect".

For plastics inside and out: "Sonax Xtreme Plastic Detailer"

Another highlight at the booth is the new "Sonax Xtreme Plastic Detailer", which expands the high-performance "Xtreme" care series in 2020. The new, highly effective innovation was specially designed by Sonax developers for the care and maintenance of unpainted plastics. The rich care emulsion is suitable for all plastic surfaces in the car interior, on the outside of the vehicle and in the engine compartment.

Bremotion celebrates premiere at the Essen Motor Show

The tuning and motorsport specialist Bremotion is exhibiting for the first time with its own stand at the Essen Motor Show. The Frankfurt company will present a Mercedes-AMG GT4 racing car and thus give an initial preview of the 2019 season.

It is planned to use one to two Mercedes-AMG GT4 in the new ADAC GT4 Germany. The ADAC GT4 Germany will take place on six race weekends as part of the popular ADAC GT-Masters and promises gripping motorsport. The choice of the AMG racing car is no accident. Bremotion has been a BRABUS Gold Partner since 2015 and refines road vehicles from Mercedes-Benz and AMG at the highest level.

The near-series GT4 racing car, which is based on the Mercedes-AMG GT R, remains unchanged and already has an extremely high racetrack performance in its series version. The Mercedes-AMG GT4 is powered by a 4.0-litre V8 engine with biturbocharging, which delivers up to 375 kW (510 hp) and over 600 Nm of torque, depending on the regulations. In addition to the ADAC GT4 Germany, the car can also be used in the VLN Endurance Championship, the ADAC 24-Hour Race at the Nürburgring, the DMV-GTC or in international GT4 series.

Bremotion is actively supported by [Senkpiel Car & Driver](#), the expert for successful driver management, and GT3 young talent [Marek Böckmann](#), who is available as driver coach. The logistics part is handled by the [Maintaler Group](#), the specialist for time-sensitive and handling-sensitive transports.

Tuning for your Suspension: ST suspensions initiate Customizing Program for its products

The ESSEN MOTOR SHOW 2019 marks the start of the new ST Customizing Program. In the future, the KW automotive brand ST suspensions will offer an extensive tuning and customizing program for its high-quality aftermarket suspension kits.

Since the end of November 2019 all mainsprings of the ST Coilover suspensions and ST height adjustable spring kits can be ordered with an individual color coating and lettering for a small extra service fee. Besides the possibility to order the springs in one of numerous different colors, ST suspensions also introduces optional spring packages for selected ST XTA Coilover suspensions, which differ in their spring rate and also the suspension travel length. In the future, the ST suspensions Customizing Program will be extended by further components.

ST suspensions have revolutionized the automotive specialist aftermarket for many vehicles with its modular ST-AZX and ST-DZX spacer disc systems. Thanks to the multi-hole circle layout and wheel hub adapters, nothing stands in the way of choosing the ideal wheel spacer in combination with rim accessory. ST suspensions now offers tested complete wheel spacer sets for use with series-production wheels from the respective car manufacturers. With these so-called "Easy Fit" complete sets, all components are tested in conjunction with the standard rims, including the tire dimensions approved by the car manufacturer.

H&R Height Adjustable Spring Sets: The sportiest suspension solution - also for automobiles with adaptive dampers

Innovative components such as the H&R height adjustable springs were already developed by the Sauerland suspension specialists at the end of the 1990s. With a current range of more than 150 applications, the focus is on vehicles which are originally equipped with adaptive suspension or damping force adjustable shocks.

The clou: Thanks to the reasoned adjustment mechanism, the H&R engineers make it possible to continuously lower the vehicle's centre of gravity by approximately 30 to 50 millimetres (contingent upon the vehicle), depending on the desired residual spring travel, even though the standard shock absorbers are retained. This not only ensures a particularly sporty vehicle appearance but also a significant increase in driving dynamics.

The H&R professionals of course carefully match the height adjustable spring systems to the respective original shocks and their individual characteristics. For this reason, neither an adaptation of the control electronics nor the technically questionable discontinuation of these is necessary, which needs to be done when installing conventional coil over suspensions. With the H&R height adjustable springs the active standard suspension remains fully functional.

From a technical point of view, the lowering of the vehicle's centre of gravity in combination with the spring characteristics finely tuned in best H&R manner reduces the roll tendency and specifies the turning behaviour more precisely. Visually, H&R height adjustable springs provide a much more sporty vehicle look with wheels that are positioned harmoniously in the mudguards.

H&R height adjustable springs are available for many vehicles, including approvals, for example:

Audi: A3 / A4 / S4 / A5 / S5 / A6 / A7 / RS4 / RS5 / R8 / Q5 / SQ5

BMW: M2 / M3 / M4 / M5 / X6M / 5 Series (F10+F11) / 6 S

BORBET LX

A wheel, which fulfills this standard to perfection, is the new design LX. This wheel combines the weight reducing machining process UnderCut with different surface technologies such as the innovative ExaPlus-technology: "anodic dipping (ATL)", which is just one of the wide range from the BORBET portfolio. Due to this, theoretically around 500 colour and surface combinations on the design LX are possible. Borbet is able to offer its retailers diverse wheel finishing options, and possibilities, even in small quantities.

Therefore, the Borbet LX secures its role, as a public magnet at the BORBET booth. The "Sporty" wheel will be available for the spring season 2019 in 8.0 and 8.5 x 19 inch. The BORBET range includes the colour versions „black glossy rim red“, „black matt spoke rim blue polished“, „black matt spoke rim polished“, „graphite spoke rim polished“ and „graphite spoke rim red polished“. These five from 500 variations are in the Borbet standard program.

MUSWAY – Music Is The Way: Technology for sound enthusiasts

The slogan “TECHNIK FÜR KLANGBEGEISTERTE” (literally: “technology for sound enthusiast”) is program at MUSWAY. This becomes particularly clear when taking a closer look at the high-end hi-fi components of the power amplifiers: Highly efficient Class D technology is used, and each channel pair can also be switched to mono, which makes it particularly easy to connect subwoofers. Even more important as function, however, is the sound: in countless listening sessions, the individual components have been fine-tuned so that even the most critical listeners get their money’s worth.

High functionality combined with the highest sound quality: It does not matter whether simple factory speakers are beefed up acoustically, or whether everything is retrieved from retrofitted, higher-quality speakers with the countless control options. In the latter case, the result is of course much better. Thanks to DSP, virtually any corrections can be clearly arranged. Whether frequency correction, Q-factor, time alignment, phase shift or extensive switch configurations, the sonic non plus ultra becomes possible in the first place.

For the audiophile and masterful-sounding DSP amplifiers, the matching game partners are now also available in the form of perfectly tuned speakers and innovatively designed subwoofer systems. Thanks to the extensive range of powerful and optimally tuned sound transducers, nothing stands in the way for a complete MUSWAY sound system in your vehicle. The passionate inventors from the MUSWAY sound lab showed the same dedication and meticulousness that was celebrated during the development of the DSP amplifiers. When designing the sophisticated loudspeakers and subwoofer systems, only the finest components and innovative materials are used, which more than just pays off in the balanced and outstanding sound performance, as well as in the power delivery and longevity.

High End Car Audio Products recapture the market

Customer's requirements in terms of in-car audio and entertainment's quality and functionality are no longer addressed solely to the car manufacturer. Individual expectations on sound, connectivity and user friendliness of automotive infotainment are rising with the hours that consumers spend in their car. Today's automobile customers wish to travel as pleasant, entertaining and as audiophile as possible. The industry is reacting to this trend with new custom fit technologies and an extended range of high-end car audio products.

In the new Hall 8, the CarMediaWorld will once again create an attractive platform for the hot topic of Car Hifi and infotainment. Leading brands such as Audio System, ESX, Gladen, Dynavin, JVC Kenwood, HiFonics, JL Audio, Musway, Pioneer and Rockford Fosgate make high fidelity, automobile connectivity and digitalization a thrilling experience. They perfectly complement the exhibition's horse-powered exhibition program and provide an opportunity to examine the technology trends and innovations and to experience them in one of the many show vehicles.

Sound Tuning goes digital

With audiophile sound, ultimate entertainment and up-to-date information, driving turns into an exciting experience - no matter which generation the car belongs to. Even proven vehicle models can be equipped flawlessly and budget-friendly with latest sound and infotainment innovations.

Licence plate holder made of aluminium AluFixx

Sometimes innovation simply lies in the detail: The MEDES Aluminium Manufaktur from Sprockhövel have once again decisively modified their ALUFIXX®Car licence plate holder. The product was equipped with a special fastening technology. Result: The new generation ALUFIXX®Car now fits every vehicle - even in problematic fastening environments (niches or beads in bumpers or bodywork).

License plate mounting with ALUFIXX®Car has become even easier:

- | Screw the brackets to the specified fixing points
- | Place the label in the grooves of the brackets from the front.
- | Tighten the clamping screws.

The number plate is clamped and additionally stabilized in the same way as a vice, thanks to the predetermined buckling points in the holders.

- | Theft is made more difficult, loss and vibration prevented.
- | One-time purchase the carrier system can be repeated over and over again can also be used.

Incidentally, the frameless license plate holder made of high-quality, corrosion- and weather-resistant aluminium impresses with its perfect appearance and simple elegance. The licence plate seems to float. No clumsy plastic edges of conventional systems interfere with the lines of the body. ALUFIXX®Car is particularly suitable for youngtimers and classic cars due to its design and optical properties.

The anodized license plate holder is available in silver aluminium or matt black, as well as in high-gloss polished and paintable versions.

Finally, ALUFIXX®Car also offers the possibility of discreet individualisation. Motif carriers (for logos, lettering, names) can be fixed behind the number plate without disturbing it.

World's first fully modular linked dynamometer

Modular dynamometer (Vtech Dyno EVO) means that there is no need to buy 4wd dyno at once. You can have front module, without electromagnetic brakes, and buy brakes, 4wd extension and additional sensors later. Thanks to fully modular design everything is expandable.

The VT2/VT4 modular chassis dynamometer series have been present on the European market for more than a decade. The first rolling road was created and installed in 1999 and since the very beginning they featured an exceptional accuracy of measurement and reliability. During the following years the chassis dynos (rolling roads) have been constantly developed and improved by the R&D department, significantly widening the product range. Today variants of V-Tech Performance's dynamometers include modular one axle dynamometer and 4wd chassis dynamometer for 4x4 vehicles. Multiple models, configurations and options of chassis dynamometer product line are available (main one axle modul is always in stock) for sale.

The dynamometers are available in both inertial and braked versions. Additionally in the 4x4 version V-Tech use a novelty system of mechanical synchronisation of front and rear axles, which gives the possibility for measuring the most modern cars, equipped with active traction control systems. Supplementary to the wide offer are dynamometers for motorcycles and quads.

CUPRA Ateca ABT with 350 HP debuts

The CUPRA Ateca is the first own model of the new SEAT brand. ABT Sportsline accompanied the development of the sporty SUV and presents the CUPRA Ateca ABT for the first time.

The SUV already delivers 300 HP (221 kW) and 400 Nm ex works. The sprint from 0 to 100 km/h takes only 5.2 seconds and the top speed is 245 km/h. Following the ABT POWER upgrade, 350 HP (257 kW) is now available. The torque also rises to a smooth 440 Nm. The top speed of the CUPRA Ateca ABT is 255 km/h, 10 km/h more than the standard model. The standard sprint from 0 to 100 km/h is shortened by two tenths, so that the data sheet now contains a smooth 5.0 seconds.

BRABUS 900 based on Maybach S 650

BRABUS 900 - the ultimate luxury supercar based on the Mercedes-Maybach S 650: 662 kW / 900 hp, 1,500 Nm of torque and a top speed over 350 km/h Sporty-elegant styling, 21-inch hi-tech forged wheels, and BRABUS radiator grille in hallmark brand design.

True to its brand, the Mercedes-Maybach S 650 represents the absolute pinnacle of automotive construction in the world. Nonetheless, even this luxury sedan leaves room for individual refinement, which BRABUS realizes with its best engineers, designers, technicians and artisans in the form of the unique BRABUS900luxury supercar.

The BRABUS ROCKET9006.3 V12 twin-turbo increased-displacement engine provides the Mercedes-Maybach S 650 with an enormous rated power output of 662 kW / 900 hp (888 bhp) and a peak torque of 1,500 Nm (1,106 lb-ft). Top speed is in excess of 350 km/h (217 mph).

To match the extreme performance of the luxury liner, the appearance of the four-seater car receives some sporty-elegant emphasis with BRABUS aerodynamic-enhancement components, a radiator grille in the hallmark styling of the luxury brand specifically designed for this model, and BRABUS "PLATINUM EDITION" forged wheels with diameters of 21 or 22 inches.

Another BRABUS domain is exclusive interior design. The company upholstery shop can fulfil any color request with regard to the finest leather, Alcantara, precious wood and carbon fibers. The BRABUS interior designers created particularly exquisite BRABUS "Masterpiece" appointments specifically for the top-of-the-range model of the S-Class.

The Mercedes-Maybach S 650 comes off the factory line with a 12-cylinder twin-turbo engine producing 390 kW / 530 hp (523 bhp) and is thus anything but underpowered.

New: PedalBox+ with app control

The PedalBox+ is the original accelerator tuning by DTE Systems and is now available with smartphone app. The pedal tuning improves acceleration by up to ten per cent for all vehicles with electronic accelerator pedal – no matter if gasoline, diesel, hybrid or electric engines. With the PedalBox app, the accelerator pedal tuning can be operated, preset and updated via app.

In addition to the keypad, the new [PedalBox+ can also be controlled with the PedalBox app](#). The accelerator pedal tuning can be easily switched on or off with the smartphone. Furthermore, each individual program preset can be customized and saved in the PedalBox app. Thus, the PedalBox+ always starts with the selected driving program and individual preferences. The PedalBox app also ensures the most recent software releases thanks to its remote update services.

The new PedalBox+ with app has four driving programs City, Sport, Sport Plus and Series to optimize the throttle response. All preset programs can be fine-tuned with the plus and minus buttons. That means that there are more than 20 different individual settings available.

A special highlight: The PedalBox app can be combined with the PowerControl app for the DTE performance box PowerControl X to control both tuning systems. With a simple wipe on the smartphone display, the driver has full control of the individual DTE tuning.

For every demand the perfect suspension

For a while, KW suspensions under the roof of the KW automotive group also offers different coilovers for electronic cars. For example, KW has developed an adaptive suspension kit with smartphone app control and hydraulic lift system for the Tesla Model S. KW will show the first Tesla Model 3 with a KW coilover kit Variant 3 that is separately adjustable in rebound and compression damping stage. Besides the electrified compact model, KW in cooperation with the refiner Novitec also shows a McLaren 720S.

The super sports car equipped with aerodynamic components made of light carbon fiber has up to 806 hp and was lowered with KW suspension springs that are adjustable in height. The spring rate was specially adapted to the reworked aerodynamics and the increased performance of the 720S. The successful Nordschleife- and motorsport competence of KW is underpinned by its many years of cooperation with Manthey Racing and in Essen, the new Porsche 911 GT3 Cup MR (991.2) will even be presented. Manthey combines for this racing car the best of the Porsche Model 911 GT3 R and 911 GT3 Cup and equips the bolide, that was developed for customer motor sport, with KW suspension technology.

Introduction of new ST suspensions product group: ST height adjustable coilover springs

At the Essen Motor Show, ST will introduce its new coilover springs. The springs with individual height-adjustment will be available for numerous vehicle models like the Audi A4, Audi S3, BMW M2, Dodge Charger, Mercedes-Benz C-Class and VW Golf GTI on December 1st 2018. A continuous lowering in combination with the standard dampers can be selected due to the installation of the ST coilover springs.

Comp. Intercooler Kit Honda Civic Type R FK8

The Wagner Tuning high-performance intercooler has got a new competition core (Tube Fin) with the dimensions 670 x 183,4 x 125 millimetre (15.4 liters)/ 26,38 x 7,221 x 4,92 Inch (939,76 Inch³), which was developed especially for the requirements of the Honda Civic Type R FK8. This high-performance core offers an 23 percent larger frontal surface and 140 percent more core volume compared to the stock intercooler.

The aluminum cast endtanks were designed in CAD and optimized in CFD simulations (for an ideal internal airflow). An incorporated air baffle inside the intercooler inlet ensures a uniform filling of the intercooler. The result is an excellent cooling property with a minimal back pressure. The newly developed competition high-performance core is very light and provides the adjoining components (for example the watercooler) enough air flow by using a specially prepared air baffle. That is why this kit is perfect for racing use. An optimal cooling effect of the charged air with a significant increase in performance.

An anti-corrosion powder coating with perfect heat-conducting properties protects the Wagner Tuning intercooler from all environmental influences, so a lasting and optimal cooling effect can be guaranteed. The installation is done by replacing the original intercooler and is easy to perform (plug and play).

Inlet diameter: 65 millimetre / 2,56 Inch; outlet diameter 70 millimetre / 2,75 Inch

Dimensions stock intercooler:

$$V = 6,4 \text{ L} / 239,55 \text{ Inch}^3$$

$$A = 6403200 \text{ mm}^2 / 9 \text{ 925 Inch}^2$$

Dimensions WAGNERTUNING intercooler:

$$V = 15,4 \text{ L} / 939,76 \text{ Inch}^3$$

$$A = 15359750 \text{ mm}^2 / 23 \text{ 808 Inch}^2$$

kit comes with:

1 intercooler

1 air baffle

2 silicone hoses (black)

1 mounting material

1 installation instruction

H&R Height Adjustable Spring Sets: The sportiest suspension solution - also for automobiles with adaptive dampers

Innovative components such as the H&R height adjustable springs were already developed by the Sauerland suspension specialists at the end of the 1990s. With a current range of more than 150 applications, the focus is on vehicles which are originally equipped with adaptive suspension or damping force adjustable shocks.

The clou: Thanks to the reasoned adjustment mechanism, the H&R engineers make it possible to continuously lower the vehicle's centre of gravity by approximately 30 to 50 millimetres (contingent upon the vehicle), depending on the desired residual spring travel, even though the standard shock absorbers are retained. This not only ensures a particularly sporty vehicle appearance but also a significant increase in driving dynamics.

The H&R professionals of course carefully match the height adjustable spring systems to the respective original shocks and their individual characteristics. For this reason, neither an adaptation of the control electronics nor the technically questionable discontinuation of these is necessary, which needs to be done when installing conventional coil over suspensions. With the H&R height adjustable springs the active standard suspension remains fully functional.

From a technical point of view, the lowering of the vehicle's centre of gravity in combination with the spring characteristics finely tuned in best H&R manner reduces the roll tendency and specifies the turning behaviour more precisely. Visually, H&R height adjustable springs provide a much more sporty vehicle look with wheels that are positioned harmoniously in the mudguards.

H&R height adjustable springs are available for many vehicles, including approvals, for example:

Audi: A3 / A4 / S4 / A5 / S5 / A6 / A7 / RS4 / RS5 / R8 / Q5 / SQ5

BORBET LX

A wheel, which fulfills this standard to perfection, is the new design LX. This wheel combines the weight reducing machining process UnderCut with different surface technologies such as the innovative ExaPlus-technology: "anodic dipping (ATL)", which is just one of the wide range from the BORBET portfolio. Due to this, theoretically around 500 colour and surface combinations on the design LX are possible. Borbet is able to offer its retailers diverse wheel finishing options, and possibilities, even in small quantities.

Therefore, the Borbet LX secures its role, as a public magnet at the BORBET booth. The "Sporty" wheel will be available for the spring season 2019 in 8.0 and 8.5 x 19 inch. The BORBET range includes the colour versions „black glossy rim red“, „black matt spoke rim blue polished“, „black matt spoke rim polished“, „graphite spoke rim polished“ and „graphite spoke rim red polished“. These five from 500 variations are in the Borbet standard program.

MUSWAY – Music Is The Way: Technology for sound enthusiasts

The slogan “TECHNIK FÜR KLANGBEGEISTERTE” (literally: “technology for sound enthusiast”) is program at MUSWAY. This becomes particularly clear when taking a closer look at the high-end hi-fi components of the power amplifiers: Highly efficient Class D technology is used, and each channel pair can also be switched to mono, which makes it particularly easy to connect subwoofers. Even more important as function, however, is the sound: in countless listening sessions, the individual components have been fine-tuned so that even the most critical listeners get their money’s worth.

High functionality combined with the highest sound quality: It does not matter whether simple factory speakers are beefed up acoustically, or whether everything is retrieved from retrofitted, higher-quality speakers with the countless control options. In the latter case, the result is of course much better. Thanks to DSP, virtually any corrections can be clearly arranged. Whether frequency correction, Q-factor, time alignment, phase shift or extensive switch configurations, the sonic non plus ultra becomes possible in the first place.

For the audiophile and masterful-sounding DSP amplifiers, the matching game partners are now also available in the form of perfectly tuned speakers and innovatively designed subwoofer systems. Thanks to the extensive range of powerful and optimally tuned sound transducers, nothing stands in the way for a complete MUSWAY sound system in your vehicle. The passionate inventors from the MUSWAY sound lab showed the same dedication and meticulousness that was celebrated during the development of the DSP amplifiers. When designing the sophisticated loudspeakers and subwoofer systems, only the finest components and innovative materials are used, which more than just pays off in the balanced and outstanding sound performance, as well as in the power delivery and longevity.

Forged magnesium wheels: maximum stability with minimal weight

The light alloy rim forge mbDESIGN from Gelnhausen in Hessen, Germany, punctuates with an innovative world premiere: The unique mbDESIGN rims MF1 will be presented in a new and patented Forging technology made of magnesium. This innovative production technology has numerous advantages: wheels made of the high-tech material magnesium combine maximum stability with minimal weight.

They are up to 30 percent lighter than their conventional aluminum counterparts. For example, the filigree MF1 wheel measuring 8.0 × 19 inches ET45 weighs only a slim 7.2 kilogram - with a load capacity of 600 kilogram.

The low weight of the forged magnesium rims leads to a reduction in unsprung masses, which is reflected in a noticeably improved driving dynamics of the car and a smoother running of the wheels.

In addition, fuel consumption and CO2 emissions of the vehicles are reduced, with e-cars, the range increases. In addition, Forged Magnesium Rims manufacturing technology allows designers maximum design flexibility.

Incidentally, these benefits are not paid for with an exorbitant price: The Forged magnesium rims from mbDESIGN are offered at a lower price than some aluminum forged wheels: mbDESIGN announces a purchase price of 680 euros for the MF1 in 8.0 × 19 inches.

The MF1 will be available in 7,5x17 ", 7,5x18", 8,0x19 "8,5x19" and 9x19 ", the 20" Varaine is planned for 2020. Of course they also tested the Magensium wheels by mbDESIGN and in 8x19 "even with an ABE.

Deep and punchy bass in all sizes: ZEUS ZRX subwoofers from HiFonics

The brandnew ZEUS ZRX subwoofers from HiFonics provide fresh impetus to the market by. The sub innovations are not only available in the well-known sizes 10 to 15 inches, but also in the moderate sizes of 6.5 and 8 inches.

Even at first eye contact, it becomes clear that more serious bass attacks can be expected here. Especially wide centerings, high-quality dual polycotton spiders with rear ventilation and various pole core holes guarantee a very high load capacity and compression-free reproduction.

The new-type, ribbed surrounds prevent unwanted roll effects and also allow a very linear cone deflection. The oscillating voice coils were additionally sewn twice on the bead. With all these ingredients, the ZEUS ZRX subwoofers not only boast the best impulse response and deep and punchy bass, but they are also particularly robust.

High End Car Audio Products recapture the market

Customer's requirements in terms of in-car audio and entertainment's quality and functionality are no longer addressed solely to the car manufacturer. Individual expectations on sound, connectivity and user friendliness of automotive infotainment are rising with the hours that consumers spend in their car. Today's automobile customers wish to travel as pleasant, entertaining and as audiophile as possible. The industry is reacting to this trend with new custom fit technologies and an extended range of high-end car audio products.

In the new Hall 8, the CarMediaWorld will once again create an attractive platform for the hot topic of Car Hifi and infotainment. Leading brands such as Audio System, ESX, Gladen, Dynavin, JVC Kenwood, HiFonics, JL Audio, Musway, Pioneer and Rockford Fosgate make high fidelity, automobile connectivity and digitalization a thrilling experience. They perfectly complement the exhibition's horse-powered exhibition program and provide an opportunity to examine the technology trends and innovations and to experience them in one of the many show vehicles.

Sound Tuning goes digital

With audiophile sound, ultimate entertainment and up-to-date information, driving turns into an exciting experience - no matter which generation the car belongs to. Even proven vehicle models can be equipped flawlessly and budget-friendly with latest sound and infotainment innovations.

Licence plate holder made of aluminium AluFixx

Sometimes innovation simply lies in the detail: The MEDES Aluminium Manufaktur from Sprockhövel have once again decisively modified their ALUFIXX®Car licence plate holder. The product was equipped with a special fastening technology. Result: The new generation ALUFIXX®Car now fits every vehicle - even in problematic fastening environments (niches or beads in bumpers or bodywork).

License plate mounting with ALUFIXX®Car has become even easier:

- | Screw the brackets to the specified fixing points
- | Place the label in the grooves of the brackets from the front.
- | Tighten the clamping screws.

The number plate is clamped and additionally stabilized in the same way as a vice, thanks to the predetermined buckling points in the holders.

- | Theft is made more difficult, loss and vibration prevented.
- | One-time purchase the carrier system can be repeated over and over again can also be used.

Incidentally, the frameless license plate holder made of high-quality, corrosion- and weather-resistant aluminium impresses with its perfect appearance and simple elegance. The licence plate seems to float. No clumsy plastic edges of conventional systems interfere with the lines of the body. ALUFIXX®Car is particularly suitable for youngtimers and classic cars due to its design and optical properties.

The anodized license plate holder is available in silver aluminium or matt black, as well as in high-gloss polished and paintable versions.

Finally, ALUFIXX®Car also offers the possibility of discreet individualisation. Motif carriers (for logos, lettering, names) can be fixed behind the number plate without disturbing it.

Tyre Spray: now comes the glittering effect

Your rims are sexy, but your already gray tires are a big turn-off? With the new Tyre Spray from FOLIATEC®.com the flanks shine not only blacker than ever before, but also get a cool and long-lasting glittering effect.

Spray before every little tour? You don't have to. Depending on the weather and the distance covered, the Tyre Spray will last up to several weeks. The application is really simple: Just apply the Tyre Spray on the flanks at a distance of about 25 centimetre. done. At once not only your alloy wheels are nice and shiny. Of course, this styling especially shines out when the car is in motion. What if you suddenly don't like it anymore after a while? No problem: just remove it with water and a brush.

World's first fully modular linked dynamometer

Modular dynamometer (Vtech Dyno EVO) means that there is no need to buy 4wd dyno at once. You can have front module, without electromagnetic brakes, and buy brakes, 4wd extension and additional sensors later. Thanks to fully modular design everything is expandable.

The VT2/VT4 modular chassis dynamometer series have been present on the European market for more than a decade. The first rolling road was created and installed in 1999 and since the very beginning they featured an exceptional accuracy of measurement and reliability. During the following years the chassis dynos (rolling roads) have been constantly developed and improved by the R&D department, significantly widening the product range. Today variants of V-Tech Performance's dynamometers include modular one axle dynamometer and 4wd chassis dynamometer for 4x4 vehicles. Multiple models, configurations and options of chassis dynamometer product line are available (main one axle modul is always in stock) for sale.

The dynamometers are available in both inertial and braked versions. Additionally in the 4x4 version V-Tech use a novelty system of mechanical synchronisation of front and rear axles, which gives the possibility for measuring the most modern cars, equipped with active traction control systems. Supplementary to the wide offer are dynamometers for motorcycles and quads.

DRIFT - Hybrid Gaming

Last year at the EMS 2018 Sturmkind received the German Developer Award in the category Innovation for the development of its hybrid and the game behind it. Now, two years after the delivery of the first DRIFT-Racer, the time has come to start a new chapter. DRIFT - Hybrid Gaming combines two worlds - a highly complex racing simulation and a real racing game system - in a completely new and unique way. So far, Sturmkind designed the racers itself, but now they have real models. DRIFT-Racers, which not only look, but also move and sound exactly like the big models in the real world.

This year the company officially present the first true to model DRIFT-Racers: the BMW E30 M3 and the Mercedes 190 EVO II. Both will be available as production cars as well as limited DTM race versions. After the successful Kickstarter campaign, you can now order the new racers in the online shop at www.sturmkind-shop.com.

As the original M3, the BMW E30 made automotive history. In drifting, the E30 is still a firm fixture today. It has often been converted to six-cylinder turbo engines, such as the 2jz, or V8 engines - which you can of course do in the DRIFT game: You can for example increase the performance of your M3 ingame to up to 1,000 turbo-hp or enjoy it in its original condition.

Wide, deep splitter, giant spoiler and a high-rev four-cylinder. Built only 502 times, the then competitor of the M3, the Mercedes 190 Evo II, is an absolute rarity today. Too nice to drift? Absolutely not. Even tuning is allowed - at least virtually in the DRIFT-App.

Have a look at the two beauties here: <https://www.youtube.com/watch?v=s7hG5-E5vmg>

BRABUS 900 based on Maybach S 650

BRABUS 900 - the ultimate luxury supercar based on the Mercedes-Maybach S 650: 662 kW / 900 hp, 1,500 Nm of torque and a top speed over 350 km/h Sporty-elegant styling, 21-inch hi-tech forged wheels, and BRABUS radiator grille in hallmark brand design.

True to its brand, the Mercedes-Maybach S 650 represents the absolute pinnacle of automotive construction in the world. Nonetheless, even this luxury sedan leaves room for individual refinement, which BRABUS realizes with its best engineers, designers, technicians and artisans in the form of the unique BRABUS900luxury supercar.

The BRABUS ROCKET9006.3 V12 twin-turbo increased-displacement engine provides the Mercedes-Maybach S 650 with an enormous rated power output of 662 kW / 900 hp (888 bhp) and a peak torque of 1,500 Nm (1,106 lb-ft). Top speed is in excess of 350 km/h (217 mph).

To match the extreme performance of the luxury liner, the appearance of the four-seater car receives some sporty-elegant emphasis with BRABUS aerodynamic-enhancement components, a radiator grille in the hallmark styling of the luxury brand specifically designed for this model, and BRABUS "PLATINUM EDITION" forged wheels with diameters of 21 or 22 inches.

Another BRABUS domain is exclusive interior design. The company upholstery shop can fulfil any color request with regard to the finest leather, Alcantara, precious wood and carbon fibers. The BRABUS interior designers created particularly exquisite BRABUS "Masterpiece" appointments specifically for the top-of-the-range model of the S-Class.

The Mercedes-Maybach S 650 comes off the factory line with a 12-cylinder twin-turbo engine producing 390 kW / 530 hp (523 bhp) and is thus anything but underpowered.

New: PedalBox+ with app control

The PedalBox+ is the original accelerator tuning by DTE Systems and is now available with smartphone app. The pedal tuning improves acceleration by up to ten per cent for all vehicles with electronic accelerator pedal – no matter if gasoline, diesel, hybrid or electric engines. With the PedalBox app, the accelerator pedal tuning can be operated, preset and updated via app.

In addition to the keypad, the new [PedalBox+ can also be controlled with the PedalBox app](#). The accelerator pedal tuning can be easily switched on or off with the smartphone. Furthermore, each individual program preset can be customized and saved in the PedalBox app. Thus, the PedalBox+ always starts with the selected driving program and individual preferences. The PedalBox app also ensures the most recent software releases thanks to its remote update services.

The new PedalBox+ with app has four driving programs City, Sport, Sport Plus and Series to optimize the throttle response. All preset programs can be fine-tuned with the plus and minus buttons. That means that there are more than 20 different individual settings available.

A special highlight: The PedalBox app can be combined with the PowerControl app for the DTE performance box PowerControl X to control both tuning systems. With a simple wipe on the smartphone display, the driver has full control of the individual DTE tuning.

For every demand the perfect suspension

For a while, KW suspensions under the roof of the KW automotive group also offers different coilovers for electronic cars. For example, KW has developed an adaptive suspension kit with smartphone app control and hydraulic lift system for the Tesla Model S. KW will show the first Tesla Model 3 with a KW coilover kit Variant 3 that is separately adjustable in rebound and compression damping stage. Besides the electrified compact model, KW in cooperation with the refiner Novitec also shows a McLaren 720S.

The super sports car equipped with aerodynamic components made of light carbon fiber has up to 806 hp and was lowered with KW suspension springs that are adjustable in height. The spring rate was specially adapted to the reworked aerodynamics and the increased performance of the 720S. The successful Nordschleife- and motorsport competence of KW is underpinned by its many years of cooperation with Manthey Racing and in Essen, the new Porsche 911 GT3 Cup MR (991.2) will even be presented. Manthey combines for this racing car the best of the Porsche Model 911 GT3 R and 911 GT3 Cup and equips the bolide, that was developed for customer motor sport, with KW suspension technology.

Introduction of new ST suspensions product group: ST height adjustable coilover springs

At the Essen Motor Show, ST will introduce its new coilover springs. The springs with individual height-adjustment will be available for numerous vehicle models like the Audi A4, Audi S3, BMW M2, Dodge Charger, Mercedes-Benz C-Class and VW Golf GTI on December 1st 2018. A continuous lowering in combination with the standard dampers can be selected due to the installation of the ST coilover springs.

PS spray wax as XMas edition

The same every year - the search for the perfect Christmas present for the loved ones is sometimes difficult and tedious. But why spend the pre-Christmas time with stressful thoughts around the gift selection, if PS Profi Care can answer the question of the right men's gift today?

The exclusive XMas edition of the popular spray wax awakens the beautiful memories of the time when he was still dreaming of the driver's license with the toy car under the tree. The wax not only let the big dream car shine, but also men's eyes. In addition to this, the XMas edition comes up with a special Christmas scent. It is available for the first time in a limited edition on the PS booth.

The high-performance product range for the Mercedes-AMG A 35 4MATIC

Efficient aerodynamic-enhancement components, tailor-made wheels and individual options for the interior design, a maximum output of 268 kW / 365 hp (359 bhp), 460 Nm (339 lb-ft) peak torque and just 4.4 seconds from zero to 100 km/h (62 mph) thanks to all-wheel drive: BRABUS transforms the new Mercedes-AMG A 35 4MATIC into one of the sportiest of its compact kind.

Of course, the BRABUS product range offers not only more power, but also equally attractive and efficient aerodynamic-enhancement components and exclusive upgrades for the interior.

The unique three-year or 100,000-kilometer / 62,000-mile BRABUS Tuning Warranty® (see BRABUS Tuning Warranty Terms and Conditions, updated July 2013) documents the outstanding quality of all developments of the world's largest independent automotive refinement specialists.

Comp. Intercooler Kit Honda Civic Type R FK8

The Wagner Tuning high-performance intercooler has got a new competition core (Tube Fin) with the dimensions 670 x 183,4 x 125 millimetre (15.4 liters)/ 26,38 x 7,221 x 4,92 Inch (939,76 Inch³), which was developed especially for the requirements of the Honda Civic Type R FK8. This high-performance core offers an 23 percent larger frontal surface and 140 percent more core volume compared to the stock intercooler.

The aluminum cast endtanks were designed in CAD and optimized in CFD simulations (for an ideal internal airflow). An incorporated air baffle inside the intercooler inlet ensures a uniform filling of the intercooler. The result is an excellent cooling property with a minimal back pressure. The newly developed competition high-performance core is very light and provides the adjoining components (for example the watercooler) enough air flow by using a specially prepared air baffle. That is why this kit is perfect for racing use. An optimal cooling effect of the charged air with a significant increase in performance.

An anti-corrosion powder coating with perfect heat-conducting properties protects the Wagner Tuning intercooler from all environmental influences, so a lasting and optimal cooling effect can be guaranteed. The installation is done by replacing the original intercooler and is easy to perform (plug and play).

Inlet diameter: 65 millimetre / 2,56 Inch; outlet diameter 70 millimetre / 2,75 Inch

Dimensions stock intercooler:

$$V = 6,4 \text{ L} / 239,55 \text{ Inch}^3$$

$$A = 6403200 \text{ mm}^2 / 9 \text{ 925 Inch}^2$$

Dimensions WAGNERTUNING intercooler:

$$V = 15,4 \text{ L} / 939,76 \text{ Inch}^3$$

$$A = 15359750 \text{ mm}^2 / 23 \text{ 808 Inch}^2$$

kit comes with:

1 intercooler

1 air baffle

2 silicone hoses (black)

1 mounting material

1 installation instruction

Aixam coupe

The Aixam coupe range is aimed at the enthusiasts among light vehicle drivers. The coupe is available in three different trim levels.

With its value-for-money equipment, the coupe Evo offers all the advantages of the coupe models for the frugal driver, without sacrificing the essentials.

The coupe Premium also offers many small comfort features, such as a center console with cup holders, chic chrome details and much more.

The GTi packs a powerful hi-fi system and blue accents like the belt on top.

The advantages of the coupes would be a longer wheelbase and thus more space in the trunk compared to the Aixam City series - you want to transport a larger household appliance such as a dryer? The coupe swallows the charge without complaint. Then there is the attractive, extended roofline. And all this without having to forego the advantages of the city models, such as the easy search for a parking space.

EDITION-1 FlowForged wheels

The EDITION 1 is the brand new wheel of the FlowForged series and is manufactured using FlowForging or FlowForming technology. FlowForging means, that the wheel center including additional material for the rim is casted and afterwards the rim is rolled out, what is a cold roll forging process. Therefore the wheel is light exactly where it is most important - on the outside of the wheel.

The EDITION 1 impresses not only with technical aspects such as precise easing and high quality, but also with exclusive design features. The badge, which proudly bears the name "EDITION 1" and the brand name, both placed on the outer rim flange. The "undercut" not only makes the wheel lighter but also ensures a particularly cool look.

The EDITION 1 is available in 8.5 x 20 / 9.5 x 20 and 10.5 x 20. All sizes are available in the PCD 5 x 112 and 5 x 120 as well as in a wide variety of offsets and therefore fit many models from Audi, BMW, Mercedes, Seat, Skoda and many more. The 8.5 x 20 has a lot of brake clearance and is therefore also suitable for RS3, TTRS and the Cupra models. The 9.5 x 20 and 10.5 x 20, on the other hand, have a nice amount of concavity and thus appear particularly wide.

CUPRA Ateca ABT with 350 HP debuts

The CUPRA Ateca is the first own model of the new SEAT brand. ABT Sportsline accompanied the development of the sporty SUV and presents the CUPRA Ateca ABT for the first time.

The SUV already delivers 300 HP (221 kW) and 400 Nm ex works. The sprint from 0 to 100 km/h takes only 5.2 seconds and the top speed is 245 km/h. Following the ABT POWER upgrade, 350 HP (257 kW) is now available. The torque also rises to a smooth 440 Nm. The top speed of the CUPRA Ateca ABT is 255 km/h, 10 km/h more than the standard model. The standard sprint from 0 to 100 km/h is shortened by two tenths, so that the data sheet now contains a smooth 5.0 seconds.

BRABUS 900 based on Maybach S 650

BRABUS 900 - the ultimate luxury supercar based on the Mercedes-Maybach S 650: 662 kW / 900 hp, 1,500 Nm of torque and a top speed over 350 km/h Sporty-elegant styling, 21-inch hi-tech forged wheels, and BRABUS radiator grille in hallmark brand design.

True to its brand, the Mercedes-Maybach S 650 represents the absolute pinnacle of automotive construction in the world. Nonetheless, even this luxury sedan leaves room for individual refinement, which BRABUS realizes with its best engineers, designers, technicians and artisans in the form of the unique BRABUS900luxury supercar.

The BRABUS ROCKET9006.3 V12 twin-turbo increased-displacement engine provides the Mercedes-Maybach S 650 with an enormous rated power output of 662 kW / 900 hp (888 bhp) and a peak torque of 1,500 Nm (1,106 lb-ft). Top speed is in excess of 350 km/h (217 mph).

To match the extreme performance of the luxury liner, the appearance of the four-seater car receives some sporty-elegant emphasis with BRABUS aerodynamic-enhancement components, a radiator grille in the hallmark styling of the luxury brand specifically designed for this model, and BRABUS "PLATINUM EDITION" forged wheels with diameters of 21 or 22 inches.

Another BRABUS domain is exclusive interior design. The company upholstery shop can fulfil any color request with regard to the finest leather, Alcantara, precious wood and carbon fibers. The BRABUS interior designers created particularly exquisite BRABUS "Masterpiece" appointments specifically for the top-of-the-range model of the S-Class.

The Mercedes-Maybach S 650 comes off the factory line with a 12-cylinder twin-turbo engine producing 390 kW / 530 hp (523 bhp) and is thus anything but underpowered.

New: PedalBox+ with app control

The PedalBox+ is the original accelerator tuning by DTE Systems and is now available with smartphone app. The pedal tuning improves acceleration by up to ten per cent for all vehicles with electronic accelerator pedal – no matter if gasoline, diesel, hybrid or electric engines. With the PedalBox app, the accelerator pedal tuning can be operated, preset and updated via app.

In addition to the keypad, the new [PedalBox+ can also be controlled with the PedalBox app](#). The accelerator pedal tuning can be easily switched on or off with the smartphone. Furthermore, each individual program preset can be customized and saved in the PedalBox app. Thus, the PedalBox+ always starts with the selected driving program and individual preferences. The PedalBox app also ensures the most recent software releases thanks to its remote update services.

The new PedalBox+ with app has four driving programs City, Sport, Sport Plus and Series to optimize the throttle response. All preset programs can be fine-tuned with the plus and minus buttons. That means that there are more than 20 different individual settings available.

A special highlight: The PedalBox app can be combined with the PowerControl app for the DTE performance box PowerControl X to control both tuning systems. With a simple wipe on the smartphone display, the driver has full control of the individual DTE tuning.

For every demand the perfect suspension

For a while, KW suspensions under the roof of the KW automotive group also offers different coilovers for electronic cars. For example, KW has developed an adaptive suspension kit with smartphone app control and hydraulic lift system for the Tesla Model S. KW will show the first Tesla Model 3 with a KW coilover kit Variant 3 that is separately adjustable in rebound and compression damping stage. Besides the electrified compact model, KW in cooperation with the refiner Novitec also shows a McLaren 720S.

The super sports car equipped with aerodynamic components made of light carbon fiber has up to 806 hp and was lowered with KW suspension springs that are adjustable in height. The spring rate was specially adapted to the reworked aerodynamics and the increased performance of the 720S. The successful Nordschleife- and motorsport competence of KW is underpinned by its many years of cooperation with Manthey Racing and in Essen, the new Porsche 911 GT3 Cup MR (991.2) will even be presented. Manthey combines for this racing car the best of the Porsche Model 911 GT3 R and 911 GT3 Cup and equips the bolide, that was developed for customer motor sport, with KW suspension technology.

Introduction of new ST suspensions product group: ST height adjustable coilover springs

At the Essen Motor Show, ST will introduce its new coilover springs. The springs with individual height-adjustment will be available for numerous vehicle models like the Audi A4, Audi S3, BMW M2, Dodge Charger, Mercedes-Benz C-Class and VW Golf GTI on December 1st 2018. A continuous lowering in combination with the standard dampers can be selected due to the installation of the ST coilover springs.

KW Clubsport coilover kits in combination with MacPherson struts in upside-down-design

The popular and three-way adjustable KW V4 Clubsport coilover dampers received a technical revision to match the latest BMW M3 sedan, BMW M4 coupe, BMW M4 competition, and the new BMW M4 CSL. Similar to the racing applications in BMW's M4 GT4 customer program, the latest KW V4 Clubsport coilover kit generation is manufactured with a motorsport alloy steel in combination with a 40-millimeters inverted-monotube damper cartridge.

The new feature is that the current generation of the KW V4 Clubsport suspension is now manufactured from a motorsport steel alloy in combination with 40-millimeter upside-down damper cartridges, as is the case in racing applications in customer sports over. KW also relies on an upside-down design for the new four-way adjustable KW V5 Clubsport coilover suspension for the BMW M4. The KW V5 damper technology, on the other hand, uses the KW Solid Piston Technology proven in the DTM as it is also used by the DTM champion Sheldon Van der Linde of Schubert Motorsport on the BMW M4 GT3 exhibited at the KW booth.

Powerdrop adhesives

PowerDrop adhesives are modified reactive adhesives (cyanoacrylates). They are applied in liquid form and, under suitable conditions, react to form solids (curing). The cured adhesive is a plastic. Depending on the material, the adhesive surfaces harden quickly. Smooth within a short time (glass, metal, plastic, rubber) - porous after just a few minutes (wood, leather, porcelain, ceramics, clay). Different materials can also be bonded without any problems. The gap filling capacity is maximum 0.25 millimetre For larger gap widths, PowerDrop fillers are recommended.

Application areas:

Its adhesion to most materials is excellent and its adhesive strength under shear and tensile stress is very good. PowerDrop adhesives are largely water, lye, oil, grease, UV, light, heat and cold resistant.

Processing:

As a minimum requirement for surface treatment, is recommended: Oil, grease or other layers (old glue, rust) must be removed (with PowerDrop Remover). Apply a thin layer of PowerDrop to one side, press together, leave for a few seconds and then allow to harden for some time, depending on whether the surface is porous or smooth. This item may only be used in accordance with the manufacturer's instructions/operating instructions. Read the manufacturer's instructions and observe the product or safety data sheet.
