Experts in can  
making machines  
and equipment

# KLINGHAMMER BERTIL OHLSSON LARSEN

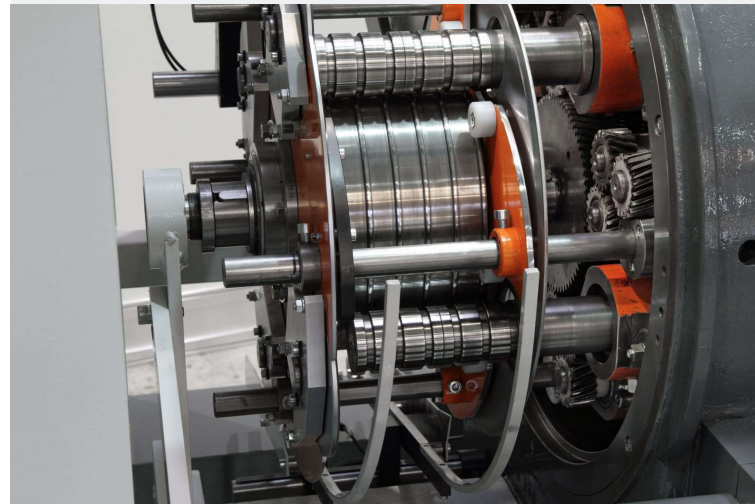

---

With 275 years combined experience we produce high quality machines and equipment for the manufacture of three-piece cans and shaped cans.

For customers worldwide, we develop systems for flanging, seaming and beading; shaping and expanding; and ear welding and bailing/handle-welding.

## Machines, toolings and spare parts

Our machine design prioritises easy handling, short change-over times, long-lasting quality, as well as the integration of modern computer technology and data management systems. Our services include machine upgrades, spare parts and tooling.

## Machinery for all types of 3-piece cans

We manufacture machines for all types of 3-piece cans. Starting with classical round cans, straight or necked, via classical canisters in rectangular form up to shaped cans in many different configurations.

Our machines allow our customers to cover all typical back-end operations needed for these cans from one single source.

## Quality materials | Made in Germany

Grinded and polished profile

Honed bore for a precision fit

Precision bearings

Hexagon socket
