Trade fair for professional cutting technology:

## Cutting World 2025 presents a dedicated area for non-metallic cutting for the first time

Non-metallic cutting technologies are becoming increasingly important in the cutting and separating industry. Cutting World from May 6 to 8, 2025 at Messe Essen is now taking this development into account. With a special exhibition area for these technologies, the international trade fair offers visitors and exhibitors the opportunity to gain an insight into the latest processes, methods and tools in this specialist field.

“We are delighted to be able to present this new exhibition area at Cutting World 2025. The non-metallic cutting segment is becoming increasingly relevant, which is why we want to offer our exhibitors and visitors a platform to discuss the latest developments in this field and make important contacts,” explains Julia Jacob, Project Manager of Cutting World.

### Innovative technologies and systems

The new exhibition area is particularly dedicated to the special challenges and solutions for cutting materials such as plastics, glass, textiles, rubber, foams and other non-metallic substances. Innovative techniques and systems will be presented that guarantee particularly clean and precise cuts.

Companies interested in presenting their products and solutions in this specialized area have the opportunity to benefit from an early booking discount. Until May 31, you have the opportunity to save ten percent on stand rental and secure an attractive place at the leading trade fair for cutting technology at an early stage.
