

DIVERSITY GROWN WITH PASSION

Tree nursery

# De Bruyn

Tree nursery De Bruyn has been growing trees, conifers, solitary trees and large shrubs on more than 185 hectares for over 35 years. With more than 1,500 different species, varieties and cultivars, we are among the most species-rich tree nurseries in the Benelux. This assortment is grown with respect for the plant material and its environment. For instance, insecticides and fungicides have not been used in the nursery for 10 years. The lanes between the trees are sown with grass and flower seeds. Tree nursery De Bruyn is in possession of the MPS-A certificate, which is recognised by the government as a parameter of sustainability.

In addition to our wide range of choices, you can also come to us for hedge plants, shrubs, perennials, ornamental grasses and other park and garden plants that make your green project into a whole. We are happy to help integrate trees into green projects. Whether they are intended for public spaces, private grounds or private gardens, by talking to you and sharing our many years of experience with you, we can give you targeted advice on the choice of trees.

35 years of diversity

10 years no insecticides and fungicides
