Cultivating Innovation

Welcome

Welcome to our 2024/2025 catalogue! We appreciate your business during 2023 and hope to continue serving you in the years to come. The world has undergone significant changes since our last online catalogue. Despite these challenges, we remain committed to our responsibilities to the environment and our fellow man and we should feel blessed to be able to rise to these challenges.

Technology continues to improve our communications and our small Island on the western edge of Europe is more connected than ever, we have weathered the challenges of BREXIT, high fuel costs, and ongoing global conflicts etc. In the past three years, we have invested over €1.5m in our infrastructure, including water re-circulation and collection systems and more efficient and hygienic greenhouse infrastructure as well as our crop and food investments.

Our investments in clean water and a clean greenhouse environment have boosted our already relatively pest and disease-free climatic conditions. We prioritize phytosanitary health and our commitment to the environment and community. Our isolated location allows us to use back loads to the Netherlands, and then onwards to export to many countries within and outside of Europe.

We continue to work on making our plants widely available in the UK and EU while maintaining positive relationships with other plant companies and direct-to-grower clients. Our niche specialist producer strategy has proven successful with growth on all ranges in the continental European, USA, and Japanese markets. We only bring plants raised from tissue culture into our production, following tight self-imposed as well as national and EU regulations.

Strong interest has remained in vibrant, easy care patio container foliage plants for solitary and mixed planters and our EverColor® series is going from strength to strength internationally and sales numbers growing positively. Our commitment to innovation and meeting consumer demands is at the heart of our work.

As consumers increasingly show interest in the health benefits of plants and plant-based foods, we are excited to evolve our product lines to meet this trend. We are proud to announce that we will launch our new edibles program in the 2025 sales season. As part of preparation for this initiative, we have removed all edibles from our current catalogue, with the exception of Wasabi. Our track record in innovation has been a cornerstone of our culture since the foundation of our nursery.

Our increased volume capabilities and the addition of new product lines over the last three years are just the beginning. We are committed to offering carefully selected plants for your profitable production and look forward to working with both existing and new customers in the future.

To our many long-standing customers and breeder agents, we thank you for your business and collaboration over the years. We remain dedicated to placing new product development at the forefront of our daily efforts and engaging with you to help in any way we can in the coming year.

Managing Director

EverColor®

Introducing the EverColor® collection: a fantastic and easy-to-grow group of plants for every season!

Developed at Fitzgerald Nurseries, this collection features 11 different evergreen Carex selections, including the new addition named Sunsplash. These plants can be grown at low temperatures and mixed and matched for landscape or garden containers. Plus, they’re a low energy crop, making them a great choice for growers.

For consumers, the EverColor® collection offers easy-to-grow, colorful foliage plants that are perfect for containers, living walls, and garden borders. Try them on their own or combine them with seasonal flowering plants for a stunning display.

MyPlant®

The MyPlant® concept was named the best garden plant concept at Plantarium in 2008 by European Garden press members. Today, our MyPlant® brand continues to focus on low care, resilient plants with stunning colors.

We were of course delighted and honoured by this prestigious award. Much has changed but a lot remains unchanged in our living environments, this niche range and our MyPlant® brand kept its philosophy and core focus on plants with attributes in keeping with low care and resilience with outstanding colour.

Most of these plants are produced from tissue culture. This makes them more expensive as young plants than cutting produced plants but fetching a premium in retail environment returning more profit to our client growers. Our MyPlant® collection brings together a range of dramatic, functional and colourful patio container plants and high impact foliage plants. These plants can be used to great effect in small garden spaces and drought tolerance has been considered in the selection process, especially for our container plant selections. MyPlant® is our focus for innovation in those special plants for which Fitzgerald Nurseries has become known in many markets for Cultivating Innovation.

We look forward to introducing many more wonderful trend setting plants through our MyPlant® category over the coming years. MyPlant® is more than a name. It has become a process for the business to evaluate, trial and develop these very different plants and bring them to our customers worldwide.

Plant Production

At Fitzgerald Nurseries, we've been in production for over 33 years, always evolving to meet market demand and remain competitive.

Our focus on foliage plants for outdoor spaces has led us to specialize in niche production. We pride ourselves on our plant suitability, trend-matching, and production strengths.

We've also worked hard to establish a safe route to market, distributing our plants throughout Europe, the US, and beyond. Our biosecurity strategy system, implemented with support of the Irish Department of Agriculture, protects our production from disease and pest contamination. We import only sterile material, and our production is pre-booked ahead of time.

Our mission is to be a specialist supplier to our nursery clients and young plant company partners.

Variety Development

Fitzgerald Nurseries has been leading the charge in innovation with a focus on developing new plant varieties.

Fitzgerald Nurseries has been leading the charge in innovation with a focus on developing new plant varieties. With a stunning range of ornamental garden plants and food crops, including a breakthrough in Wasabi varieties, internationally acclaimed sweet potato programmes, Fitzgerald Nurseries is poised to bring further innovation to the home grown and artisanal producer of food crops.

Keep an eye out for our latest Wasabi innovations, a result of 8 years of collaboration with Japanese breeder partners, hitting the mass market soon. Stay tuned as Fitzgerald Nurseries continues to evolve their food plant program with exciting surprises to come.
