

Heliospectra – Commercial Horticulture LED Grow Lights

Founded in Sweden in 2006 by visionary plant scientists and biologists, Heliospectra is at the forefront of revolutionizing plant production to be smarter and more resource efficient. With a global presence spanning seven continents, we have become the leading innovator in horticultural lighting technology, offering customized light control systems and specialized services tailored for greenhouse and controlled environment plant growth.

As the leader in intelligent LED grow lights for commercial growers and plant scientists, our mission is to enable growers to consistently and sustainably produce the highest quality crops. Our commitment to advancing controlled environment food production through intelligent LED technology and automation software is designed to reduce energy costs, minimize production waste, and improve overall crop quality - resulting in produce that not only looks better, tastes better, and has a longer shelf life.
