THE
WOOD FIBER
COMPANY

WOOD FIBER FROM ALL KINDS OF WOOD

FEATURES OF THE BIOEXTRUDER

STURDY, RELIABLE EQUIPMENT
LOW MAINTENANCE COSTS
AUTOMATIC - NO OPERATOR NEEDED
PRODUCTION UP TO 40 m³/h
CONSUMPTION: 5-6 kW/m³
POSSIBILITY TO SELECT THE SIZE AND QUALITY
OF THE WOOD FIBER
LOW, EASY, FAST MAINTENANCES

PROMEKO
BIOEXTRUDER
the wood fiber company

The Bioextruder is a patented machine with a proven track record of over twenty-five years.

The extrusion process exerts pressure and friction on the material resulting in a temperature increase up to 125°C causing the steam explosion and the defibration of wood: this changes the physical structure of wood and eliminates bacteria.

The machine is robust, reliable and can process all kinds of woody feedstocks.

The wood fiber produced is easy and ready to use, has superb water and nutrient holding capacity, low salt content, neutral pH, mixes easily in growing media blends and does not need further treatments.
