

SAUTTER & STEPPER GmbH

Hall 2 Stand 2C39

SAUTTER & STEPPER GmbH represents competence in biological crop protection for over 35 years. In addition to the breeding and distribution of beneficial insects, a main focus is on the customer service - both horticulturists and hobby gardeners are advised on all aspects of the biological use of beneficial insects. A wide variety of sectors is covered - from classic ornamental plant production to vegetable and fruit cultivation to the point of landscaping and plant research. The use of beneficial insects in botanical gardens for the species conservation or for the storage product protection also plays an equally important role. The experienced team of consultants finds suitable biological solutions for most problems and creates individual beneficial insect operation schedules for all horticulture types. Quality management and the development of new application forms of beneficial insects are also key aspects of **SAUTTER & STEPPER GmbH**. The range includes over 60 different beneficial insects including bumblebees for pollination and is completed by various biological pesticides, soil and plant additives, attractants, pheromone and capture tapes, dosing devices and various information material.
