Global Warming

Everybody will agree that we do have responsibility to save planet from global warming and change in climatic conditions.

Peat-bogs are precious habitats right across Europe and world wide, and we should now be going peat-free as a matter of urgency

Around the world, overuse of peat moss by gardeners and others has led to environment concerns peat extraction comes from a rare and endangered habitat.

Peat bogs contributes to the welfare of all living things by locking up Carbon that would otherwise increase the greenhouse effect

Coco peat is a successful natural and viable alternative to mined peat moss. Therefore using coco peat and organic which helps slow down in peat extraction.

Prevent Global Warming
