

KNECHT *FertiCon* - From Plant Manufacturer to System Provider

With **KNECHT *FertiCon***, KNECHT GmbH expands its portfolio to include digital control systems for fertilizer mixing installations. The company takes a decisive step forward—from plant manufacturer to system provider.

The result:

Greater safety, improved production control, and stable fertilization processes in your operation.

Fertilizer mixer and control system—now everything from a single source.

KNECHT *FertiCon* ensures precise nutrient dosing, stable recipes, and reliable, interference-free communication between all sensors, controllers, and dosing units—without interface losses. The modular system architecture enables customized functional expansions tailored to your operation.

Fertilizer mixing installations equipped with **KNECHT *FertiCon*** control systems can be operated as autonomous systems. Integration into external building and process automation systems is also possible.

Developed, programmed, and manufactured in Germany—by **KNECHT**.

With **KNECHT *FertiCon***, the company opens up access to new digital expertise for its customers — well-conceived and purpose-built for operations that rely on reliability and efficiency.

For the editorial team's clarification:

FertiCon is a combination of the English word for fertilizer (“Ferti”) and the abbreviation “Con” (short for control or connectivity).
